Portfolio: <https://bencer3283.github.io/art/>

B.Sc. Bio-Mechatronics Engineering & B.A Economics,
National Taiwan University (NTU), Jan 2023

Notable Skills

SolidWorks, Fusion, Rhino, Keyshot, Figma, Adobe PS/AI/ID, electronics (Arduino)

Experiences

Lead Graduate Instructor, RISD Co-Works Lab, Sep. 2024 - Providence, RI

- Instruct students to use a wide range of digital fabrication equipment, including 3D printing, UV printing and laser cutting.

Research Assistant, RISD (directed by Prof. Peter Yeadon), Aug. 2024 - Providence, RI

- Designed and prototyped a patent-pending atmospheric water generator that can generate water from air, including its mechanical structure, thermal management and power circuit.
- Implemented a thermal and air flow simulation in Autodesk CFD to inform the design parameters of the prototype, opening up the possibility of a architecture-scale application.

Product Development Apprentice, Google, Jun. - Sep. 2024 Taipei, Taiwan

- Led a team of 5 to design a Hardware as a Service platform for managing lost items in public facilities.
- Built several mock-ups and prototypes with Figma and Raspberry Pi. Drove the development from a single product to a holistic platform.

E-Lab Research Assistant, RISD Industrial Design, Feb. 2024 - Providence, RI

- Fostered literacy of technology in RISD by working with departmental leaders to design devices and curriculums in topics like electronics circuit, Arduino/ESP32, RESTful API and web backend development and mobile app development.

Electro-mechanical Engineering Intern, Logitech, Feb. - Jun. 2022 Hsinchu, Taiwan

- Created a brand new breed of keyboard technology by conducting quantitative user research with 50 interviewees and innovating a microcontroller-based prototype.
- Collaborated with product management and design departments to explore marketing opportunities.

College Student Researcher, NTU, Jul. 2021 - Feb. 2022 Taipei, Taiwan

- Built a one-stop, from-acquire-to-analysis solution to improve the user experience of scientific spectral measurement. Mapped existing bottlenecks by being involved in research projects in spectral mapping.
- Awarded the **2021 Technology Innovation Award** by CCMS, NTU and **College Student Research Creativity Award** by National Science and Technology Council of Taiwan with this project.

Projects

MITM Router

- Conceptualized and built a WIFI router that brings physical, tactile responses to the user's internet usage.
- Extensive prototyping and user testing of the physical user interface was performed to make critical design decisions.

PageMate smart bookmark

- Built the physical prototype and web service of a smart bookmark that can display reading progress of the user's ebooks.
- Using Figma to create a demo experience that can be updated in real time using my Node.js web service.

(Publication) TeleSHift: Telexisting TUI for Physical Collaboration & Interaction

- Designed and prototyped a 3D tangible user interface that was awarded at 2022 ACM Ubicomp conference.
- Designed the robust interactive mechanisms (SolidWorks) and the microcontroller-based prototype. My design for manufacturability (DFM) improvements also slashed assembling time by 80% during demo.
