Portfolio: <https://bencer3283.github.io/art/>

Master of Industrial Design, Rhode Island School of Design, Jun. 2026

Cross-enrollment at School of Engineering, Brown University

B.Sc. Bio-Mechatronics Engineering, National Taiwan University, Jan 2023

Skills

- Electrical: PCB design (Altium), STM32, Raspberry Pi, system interface (I2C, SPI, UART)
- Coding: C/C++, JavaScript (React, Express, MongoDB), Dart (Flutter), Python (PyTorch, NumPy), Git, Linux

Experiences

Faculty of Record, Dept. of Industrial Design, RISD, Jan. - Feb. 2026

Providence, RI

- Taught an introductory studio class (ID1531) that employed theoretical lectures, demo, and hands-on workshop to cover topics like microcontroller, circuit theory, serial communication, and machine learning.
- Blended technical skill with discussion on the societal impact of technology with academic topics like Science and Technology Studies.

Design Technologist Intern, Smart Design, Jun. - Aug. 2025

Brooklyn, NY

- Developed embedded firmware (STM32) for prototyping the HMI of a household product, while working with UX designers to test and fine-tune user interaction flow and hardware user interface.
- Developed testing units for motor and pneumatic mechanisms in the product, including the electrical hardware, embedded firmware and host software. (PyQt)

Product Development Apprentice, Google, Jun. - Sep. 2024

Taipei, Taiwan

- Led a team of 5 to design a Hardware-as-a-Service platform for managing lost items in public facilities. Laid out the system architecture of the hardware kiosk, user-facing app and web services.
- My prototypes of Raspberry Pi and ESP32 hardware, a React-based website, a mobile app and a RESTful API service drove the development direction from a single hardware product to an integrated platform.

Electro-mechanical Engineering Intern, Logitech, Feb. - Jun. 2022

Hsinchu, Taiwan

- Created a new breed of keyboard technology with an Arduino microcontroller-based prototype to control actuators like stepper motor and electromagnet. Also lots of CAD (Creo) and SLA/FDM prototyping on the mechanical design.
- The prototype contributed to the product development direction of the gaming keyboard team across ID, PM and EE/ME and became part of Logitech's innovation arsenal.

Projects & Publications

Frictional Intelligence

Posheng Cheng, NeurIPS Creative AI Track (Artwork) 2026, <https://openreview.net/forum?id=IRrg0HIyyR>

- Proposed novel physical interfaces of LLMs to emphasize the importance of human agency, deliberation and literacy in human-AI interaction.
- Designed, debugged and programmed several HMI embedded systems that incorporate BLDC motor, ToF sensor, touch sensing and USB-PD.

MITM Router

- Questioning the endless pursuit of technology advancement, I built a WI-FI router that uses tactile interactions to slow down the user's internet while requesting their input.
- Extensive prototyping and user testing of the physical user interface was done using several sensors/actuators on a RP2040 microcontroller along with the Linux networking stack on a Raspberry Pi.
